NPIC Project J-258/63

25X1D A suspect SAM site, constructed since the summer of [ ] is located on level, open terrain 1.7 nm WNW of Johvi (spelled Jonni in referenced chart), 26 nm west of Narva, and 4.7 nm south of the Gulf of Finland. The suspect site is served by an all-weather road and consists of an unsecured support area and a double-fenced, H-shaped suspect launch area. The suspect launch area contains a revetted, centrally located possible guidance position measuring 200 by 100 feet (Figure 1, Item 1). C-shaped revetments on either side of the interior access road enclose this possible guidance position which appears to contain several objects, including a possible vehicle. The enclosed area does not appear to have any hard surfacing. The four road termini, which are suspect launch positions (Item 2), are flared, unrevetted, and form a square 575 feet on a side. At each terminus there is a short tower with splayed legs, and adjacent to three of these termini is a spur road on which there is a long, low possible trailer. A small revetted possible structure (Item 3) is located on the main access road, and possible cable lines (Item 4) extend from the central position to the road termini. The support area (Item 5) contains one large building, 135 by 45 feet, and three small buildings.
